REMARKS IN SUPPORT OF PRE-APPEAL BRIEF CONFERENCE

Mail Stop AF Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

Applicant submits the following amendment and remarks in support of a Request for a Pre-Appeal Brief Conference.

AUTHORIZATION TO DEBIT ACCOUNT

It is not believed that additional fees are required, beyond those which may otherwise be provided for in the documents accompanying this paper. However, in the event that additional fees are necessary to allow consideration of this paper, such extensions are hereby petitioned under 37 C.F.R. §1.136(a), and any fees required (including fees for net additions of claims) are hereby authorized to be charged to 20-0078.

Serial No.: 09/709,145

Docket No.: A-6655 (191930-1230)

REMARKS

Applicant respectfully submits that the Examiner's rejections of the claims in the pending application are clearly in error. In the outstanding Office Action, the Examiner alleges that advertisements being provided to subscribers at specific times corresponds to "schedule information". However, this is clear error because the claim recites "bandwidth allocation schedule information" and the alleged "schedule" has nothing to do with "bandwidth allocation".

The Examiner also alleges that informing a user of the availability of two different types of channels corresponds to "information describing the division of bandwidth between two services" since the two channels use different amounts of bandwidth. This is also clear error, since *information* about channel availability is not equivalent to *information* about division of bandwidth simply because the two channels use different amounts of bandwidth.

Another instance of clear error is found in the Examiner's request, in the outstanding Office Action, for "confirmation that Applicant was the first to invent: random access options used in conjunction with VOD, charging different prices to customers based on customer priority". Applicant submits that this request is in error since it attempts to improperly shift the burden of examination, and it is improper to so isolate elements from claims that include multiple elements in combination.

Rejection of Claims 1 and 11 under 35 U.S.C. §103

Claims 1 and 11 have been rejected under §103(a) as allegedly obvious over Shah-Nazaroff et al. (6,157,377) in view of Gell et al. (5,802,502) and Blahut et al. (5,532,735).

Although Applicant believes independent claims 1 and 11 are patentably distinct, the clear errors in rejecting similar elements for these claims are presented together here to facilitate review. Applicant submits that the cited combination of references does not teach "bandwidth allocation schedule information describing a division of bandwidth during a plurality of time

Serial No.: 09/709,145

Docket No.: A-6655 (191930-1230)

periods, the division of bandwidth being between at least a first service and a second service" as recited in independent claims 1 and 11. Therefore, claims 1 and 11 are allowable.

The outstanding Office Action (p. 7, para. 4) alleges that a teaching in *Blahut et al.* of providing advertisements to subscribers at specific times corresponds to "schedule information". This is clear error because the claim recites "bandwidth allocation schedule information" and the alleged "schedule" has nothing to do with "bandwidth allocation". The outstanding Office Action (p. 7, para. 4) also alleges that a discussion in *Blahut et al.* of delivering video-on-demand services using satellites corresponds to services divided between an available amount of bandwidth. Even assuming, for the sake of argument, that *Blahut et al.* does teach **services** divided between an available amount of bandwidth, the rejection is a case of clear error, since such disclosure is not a teaching of "information describing a division of bandwidth between at least a first service and a second service".

The outstanding Office Action (p. 6, para. 4) alleges that *Gell et al.* teaches "information describing a *division* of bandwidth during a plurality of scheduled periods" at Col. 4, line 34 to Col. 5, line 7. This is clear error since that passage references "using stored average data indicating the typical demand for long distance telecommunications at the relevant time of day, possibly including consideration of the day type—holiday, working day, weekend". First, these day types are not disclosed as scheduled periods. Second, even assuming, for the sake of argument, that a total amount of bandwidth can be computed from a number of calls expected in a particular time period, this total bandwidth is not equivalent to "information describing a *division* of bandwidth during a plurality of time periods".

The outstanding Office Action (p. 6, para. 4) appears to allege that a teaching of *Gell et al.* of dynamically assigning a price criterion based at least in part on the bandwidth allocation schedule information". Even assuming, for the sake of argument, that *Gell et al* teaches selecting a lowest price based on QoS and quality selections and that QoS is related to bandwidth, claims 1 and 11 recite "bandwidth allocation".

Docket No.: **A-6655** (191930-1230)

schedule information...describing a *division of bandwidth* during a plurality of time periods, the division of bandwidth being between at least a first service and a second service". As explained above, none of the cited references discloses "information describing a division of bandwidth". Thus, the combination of references does not disclose, teach, or suggest "dynamically assigning a price criterion" based on "information describing a division of bandwidth" between services.

2. Rejection of Claims 20 and 29 under 35 U.S.C. §103

Claims 20 and 29 have been rejected under §103(a) as allegedly obvious over *Shah-Nazaroff et al.* (6,157,377) in view of *Gell et al.* (5,802,502), *Blahut et al.* (5,532,735), and *Son et al.* (6,697,376). Although Applicant believes independent claims 20 and 29 are patentably distinct from each other, the clear errors in rejecting similar elements for these two claims are presented together here to facilitate review. Applicant submits that, for reasons similar to those discussed above in connection with independent claims 1 and 11, the cited combination of references does not teach "a pricing system that receives bandwidth allocation information, from the bandwidth allocation manager, describing the division of bandwidth between the content delivery modes, and that dynamically assigns a price criterion to each of a group of viewing options based at least in part on the bandwidth allocation information received from the bandwidth allocation manager." Therefore, claims 20 and 29 are allowable.

3. Rejection of Dependent Claims 2-8, 10, 12-17, 18, 20, 22-28, 30-46

Dependent claims 2-7, 10, and 12-17 have been rejected under §103(a) as allegedly obvious over Shah-Nazaroff et al. in view of Gell et al and Blahut et al. Dependent claims 21-26, 28, and 30-44 are rejected under §103(a) as allegedly obvious over Shah-Nazaroff et al. in view of Gell et al and Son et al. (6,697,376). Dependent claims 8 and 18 are rejected under §103(a) as allegedly obvious over Shah-Nazaroff et al. in view of Gell et al, Blahut et al. and Candelore et al. (6,057,872). Son et al. and Candelore et al. (do not make up for the deficiencies of Shah-

Docket No.: **A-6655** (191930-1230)

Nazaroff et al., Gell et al, and Blahut et al. described above. Therefore, dependent claims 2-8, 10, 12-17, 18, 20, 22-28, 30-46 are considered patentable under any combination of these references. Furthermore, since independent claims 1, 11, 20, and 29 are allowable for at least the reasons discussed above, dependent claims 2-8, 10, 12-17, 18, 20, 22-28, 30-46 are allowable for at least the reason that each depends from an allowable claim. In re Fine, 837 F.2d 1071, 5 U.S.P.Q. 2d 1596, 1598 (Fed. Cir. 1988).

CONCLUSION

Favorable reconsideration and allowance, or the re-opening of prosecution on the merits, of the present application and claims 1-8, 10-18, and 20-46 is hereby courteously requested.

Respectfully submitted,

By: /Karen G. Hazzah/
